**CONCLUSION**

**RISK**  Normal  Increased  High

Nice horse, athletic type, easy going. Good clinical. Radiographs with some comments. Slight risk for both front fetlocks. Small linear defect in the subchondral bone proximal P1 LF and RF: most likely a vascular channel or small developmental defect. No significant pathology of the fetlock joints at this time. The risk will be reasonable that the horse can be managed for the better part of a useful sports career.
