

Examination Report

Executed for:

Haesen Niels

Executed on:	22/11/2023
Name:	Eros Z
Chip Number:	981100004553691
UELN Number:	056015Z55728320
Origin:	Eldorado VD Zeshoek x Heartbreaker
Sex:	M
Birthdate:	04/04/2020
Colour:	bay

Proposed use:

Jumping

General clinical examination

Conformation and stand	No significant abnormalities
Nutritional status	No significant abnormalities
Skin and coat	Dermatitis rh pastern
Mucous membranes	No significant abnormalities
Lymph nodes	No significant abnormalities
Eyes	No significant abnormalities
Mouth	No significant abnormalities

Cardiovascular system

Heart rate at rest	No significant abnormalities
Heart rate after exercise	No significant abnormalities
Jugular vein	No significant abnormalities

Respiratory system

Spontaneous coughing	Not present
Larynx sensitivity	No significant abnormalities
Respiration at rest	No significant abnormalities
Respiration after exercise	No significant abnormalities
Laryngoscopy (if needed)	Not executed

Digestive system

External examination	No significant abnormalities
----------------------	------------------------------

Urogenital system

External examination	No significant abnormalities
----------------------	------------------------------

Nervous system

Tail tone	No significant abnormalities
Postural reflexes	No significant abnormalities
Coordination	No significant abnormalities

This report is only valid if provided with a signature and general terms and conditions.

Inspection and palpation

Head	No significant abnormalities
Neck	No significant abnormalities
Withers	No significant abnormalities
Back	No significant abnormalities
Croup	No significant abnormalities
Left frontlimb	No significant abnormalities
Right frontlimb	No significant abnormalities
Left hindlimb	No significant abnormalities
Right hindlimb	No significant abnormalities
Scars	Absent

Fore Hooves and hind hooves

Horn quality	No significant abnormalities
Hoof percussion	No significant abnormalities
Hoof inspection	No significant abnormalities; without shoes
Size and shape	No significant abnormalities

Gait

walking on hard surface

Straight line	No significant abnormalities
Small circle left	No significant abnormalities
Small circle right	No significant abnormalities

Trotting on hard surface

Straight line	No significant abnormalities
Small circle left	No significant abnormalities
Small circle right	No significant abnormalities

Trotting on soft surface

Small circle left	No significant abnormalities
Small circle right	No significant abnormalities

Cantering on soft surface

Small circle left	No significant abnormalities
Small circle right	No significant abnormalities

Flexion tests

LF: forced flexion:	Not sensitive	Trotting away:	Not lame
RF: forced flexion:	Not sensitive	Trotting away:	Not lame
LH: forced flexion:	Not sensitive	Trotting away:	Not lame
RH: forced flexion:	Not sensitive	Trotting away:	Not lame

Radiological examination x Yes 0 No

LF Navicular bone:	No significant abnormalities (c11-2)
RF Navicular bone:	No significant abnormalities (c12)
LF Underfoot joint:	No significant abnormalities
RF Underfoot joint:	No significant abnormalities
LF: Fetlock joint:	No significant abnormalities
RF: Fetlock joint:	No significant abnormalities
LH: Tarsal joint:	No significant abnormalities
RH: Tarsal joint:	No significant abnormalities*
LH: Stifle joint:	No significant abnormalities
RH: Stifle joint:	No significant abnormalities
LH: Fetlock joint:	No significant abnormalities
RH: Fetlock joint:	No significant abnormalities
Neck:	No significant abnormalities
Back:	No significant abnormalities

*slight oc intermediate ridge: acceptable

Additional examinations: not done

During the examination there were **no** indications of vices.
After the examination blood samples **were** taken for investigation of banned substances (stored 6m).

Conclusion (X Yes 0 No):

The horse receives a normal medical risk.

Kind regards,

Terms and conditions

A prepurchase or sale examination gives only my personal assessment of the current medical condition of the horse. Linked is a type of risk assessment of medical problems that can happen regarding the use of the horse.

This examination has several limitations:

- Each exam is a snapshot. Any horse can at one moment seem very healthy, or at another limping, showing heart murmurs or respiratory distress. This difference may be due to coincidence, occurred after injury or illness, changes in housing, whether or even drug camouflage prior to the exam.
- If the customer wants it, there is the possibility to include a blood sampling to detect illegal substances.
- It deals no obligation towards any results. The horse is examined in function of a client and the purpose for which the horse will be used. This exam and the standards used for it, can therefore vary between clients and horses. This report is therefore only applicable to no one else than the person stated on the report.
- The client agrees with the extent of the investigation, and realizes that this is always a compromise between risk-limitation and price for the exam. If for example an additional endoscopy or additional X-rays are desirable, this can be asked in advance or during the exam.
- The standards used in the radiographic examination can be different from those used by colleagues or universities and can differ between what is common in different countries. There are only those findings indicated that I believe are important. Deviations that I believe have no interest are not mentioned. Example: fragments at the distal border of the navicular bone (with or without a recess in the navicular bone itself), ossification of the hoof cartilage, etc.
- Since this exam is no research addressing the capabilities of the horse as a riding or sporthorse... Neither is it a valuation of the horse.
- It cannot clearly demonstrate whether the horse might have had surgery or other treatments, such as repeated infiltration of the joints, colic surgery, ... Hence it is the sole responsibility of the purchaser to cover himself here.
- It is also the sole responsibility of the purchaser to cover himself in terms of stable vices such as: crib biting, wind sucking, weaving ...
- The buyer must be aware that some diseases are seasonal, so they may not be present at the time of the inspection. (for example summer itch, headshaking, ...)
- About this aspect he must cover himself as well.
- If the buyer wants to insure the horse, he will have to wait before buying it, until he has the approval of the insurance company. A test conducted by myself, is not automatically an approval for an insurance company. They may have different standards.
- This exam gives you no advise as a future stallion, because the standards used for this can be vary between the different studbooks.
- It is also the buyer's full responsibility to receive the full ownership papers included the "mutatie luik" of the horse.
